DiCentra Organiser Plus Release Notes

For Release 2.2.50

Bug Fix in Release 2.2.50 (30th August 2017)

Class and Category Names

- If entrants included extra spaces in class and/or category names in image filenames, or used unusual capitalisation, the class/category name had to be fixed manually. This was tedious and slow for otherwise correct names.
- Such cases are now dealt with automatically.

Duplicate Images

- If two images from an entrant had the same effective filename, an error report indicated that one failed to copy. The message has now been changed to indicate a duplicate filename has been found.
- (Two images have the same effective filename if they only differ in the number of spaces in classes or categories.)

New Feature and Bug Fix in Release 2.1.48 (21st September 2015)

Image Size

- The image size in the rules dialogue now includes 1600 pixel wide images.

Competition Dates

- If the closing date is set to be ahead of the competition date, then the competition date is set to the same date as the closing date.
- If the closing date is more than 10 months behind the competition date then it is set to the competition date. If you really want to have over 10 months to process your entries, just reset the closing date.
