

# DiCentra Organiser Release Notes

For Release 1.5.45

## **New Features in Release 1.5.45 (5<sup>th</sup> September 2017)**

### **Portfolio Competitions**

- You can now use the field type *Portfolio title* in one field of the Organiser template. If this is chosen you must specify a *Seq. number* field and *Entrant name* field too. An *Image title* field is optional.

### **Ignore Field**

- If your club's choice of filename includes fields such as Membership number that may be useful for other processing, but which are not to be passed to DiCentra, you can mark them as *Ignore* in Organiser's template and they will be disregarded.

## **Bug Fix in Release 1.5.43 (30<sup>th</sup> August 2017)**

### **Multi-word Class Names**

- The previous version of Organiser only used the last word of a multi-word class name. This has been fixed and all words are used to name the class folders in the output folder.

## **New Feature and Bug Fix in Release 1.4.40 (24<sup>th</sup> September 2015)**

### **Update to .NET 4**

- Organiser has been updated to use the modern .NET 4. No other functionality has changed from the earlier version.
